Installation

## LOUVER COVER FLOOD BARRIER (LC) *RELIABLE FLOOD PROTECTION FOR LOUVERS AND WINDOWS*

The Louver Cover Flood Barrier provides fast flood protection to prevent floodwaters from entering through louvers/windows of any size. These barriers can be deployed quickly by one person as water rises, and then stored away from the opening when flood risk is low. They're available in three-sided-frame and four-sided-frame configurations. The three-sided configuration provides protection up to the top of the louver, and the four-sided option is ideal for circumstances where floodwaters are expected to reach levels above the louver.

### Louver Cover Flood Barrier Benefits

- **Quick Deployment** – Can be deployed by a single person
- **Adaptable** – Customizable to protect any size louver

Louver Cover Flood Barriers can protect a variety of louver openings near the ground, basement windows and more:
